XM radio is the best thing for the truck drivers to get thier information in a timely manner. It is a way for them to get the information directly from other drivers so that they can avoid certain roads where there are accidents and if the weather is bad in one section of the country the drivers can re-route themselves to avoid delays. They cannot get this from the regular radio stations in the time that would be helpful to them. The programming is something that is NOT available on stations or radios controlled by NAB, we pay for the priviledge of having this programming and we DO NOT want or Need the NAB to have thier fingers in satellite radio.

We respectfully request that the FCC reject NAB's petition 04-160 and allow the satellite radio to maintain the programming that WE pay for and the reason we bought the XM, Thank You.
